UK authorities issue warning over buying dental devices online

DTI

LONDON, UK: The Medicines and Healthcare products Regulatory Agency (MHRA), the health authority that regulates all medicines and medical devices in the UK, has warned dentists not to purchase dental devices from the Internet. The alert was published after a counterfeit dental drill shattered while being used on a patient.

According to the MHRA, the number of counterfeit and non-CE-marked dental products sold online has risen significantly in recent years. The medical device CE mark, which is mandatory for certain products sold within the European Economic Area, signifies compliance with the essential safety requirements defined in the European medical device regulations. Devices that do not bear a legitimate CE mark may not have been tested for safety and could fail during use, risking injury to patients and users.

However, counterfeit dental medical devices can be difficult to distinguish from genuine devices.

Since 2012, the MHRA has issued a number of warnings about medical devices that could cause serious harm to patients, including alerts about counterfeit dental x-ray machines that emitted harmful levels of radiation and counterfeit dental curing lights that could result in poor quality fillings.

The agency recommended that dentists only buy medical devices from legitimate manufacturers and suppliers, who can demonstrate that the necessary legal requirements are being met.

A list of legitimate sources for dental devices can be found on the British Dental Industry Association’s website.

Teeth found in boy’s head

DTI

BALTIMORE, USA: Brain surgeons in the US have found multiple fully formed teeth inside a tumor mass that was growing in the centre of the brain of a 4-month-old child. The boy was initially admitted to a clinic in Baltimore after a routine paediatric visit owing to an increasing head circumference.

According to the case report, which was published online on Feb. 27 in the New England Journal of Medicine, the child underwent MRI of the brain after admission to the Johns Hopkins Children’s Center, which revealed a mass (4.1 cm × 4.0 cm × 5.5 cm) close to the hypophysis. The doctors also identified structures near the mass similar to those of teeth in the mandible.

Upon surgical removal of the tumour, the surgeons found a number of teeth inside the mass, which was later identified as an adamantinomatous craniopharyngioma on pathological examination. Such slow-growing tumours arise from Rathke’s pouch, an embryonic precursor to the anterior pituitary, and consist of stratified squamous epithelium and wet keratin, and may be cystic. The cysts are filled with viscous yellow fluid containing cholesterol crystals. The doctors explained that histologically adamantinomatous craniopharyngiomas closely resemble some odontogenic tumours.

The surgery was performed about a year ago. According to the case report, since then the patient has required shunting for bilateral subdural hygromas, and received thyroid and adrenal hormone-replacement therapy. However, he is making good developmental progress and undergoes MRI regularly, the doctors said.

THE BUSINESS OF DENTISTRY

INTERNATIONAL DENTAL EXHIBITION AND MEETING APRIL 4 – 6, 2014

Suntec Singapore International Convention and Exhibition Centre

Pre-Congress Day: April 3, 2014

ONE-STOP SHOPPING AND BUSINESS NETWORKING

With more than 450 exhibitors from over 36 countries in one location - See, learn and shop for the latest and best deals in dental technology at IDEM Singapore 2014. For the traders and distribution houses, this edition will also feature many new exhibitors globally, using this exhibition as a platform to seek distributors in Asia. Establish contacts, exchange ideas and socialise with colleagues both familiar and new from the regional dental fraternity. For a full list of exhibitors, please visit our website. Register online to visit the trade exhibition for free.

A CONTINUOUS EDUCATION PROGRAM THAT IS TAILORED TO YOUR NEEDS

In four power-packed days of lectures and workshops, IDEM Singapore 2014 caters to Dentists and the rest of the dental team, including Dental Technicians, Dental Hygienists and Dental Therapists. A diverse range of topics and educational sessions will be presented, so you can tailor a valuable program that is relevant to your needs.

Planned Topics Include:

- Regenerative Endodontics
- Making “Real World” Practice Productive and Enjoyable
- Future of Dental Implants
- Developing your Ideal Practice
- Multidisciplinary Approach to Periodontal Therapy
- Adult Orthodontics Today

Speakers Highlights:

David Bartlett
United Kingdom

John O. Burgess
USA

Cordon J. Christensen
USA

Barry K. Freyberg
USA

Kan Huiruang
USA

Samuel B. Low
USA

Chatchai Kunavisarut
Thailand

Chun-Pin Lin
Taiwan

Will Martin
USA

John Molinari
USA

Deam Morton
USA

Young Park
South Korea

NEW Programmes for 2014:

#Nedentiforum • Dental Technician Forum • Dental Hygienist and Dental Therapist Forum

Exhibitor of the Year 2013
