Introducing Sensodyne Repair & Protect

Building a new layer of protection

Presenting advanced NovaMin® technology
Sensodyne Repair & Protect is the first toothpaste to harness the advanced reparative power of NovaMin® plus fluoride.

Originally developed for bone regeneration, NovaMin® delivers calcium and phosphate into your patient’s saliva and provides favorable conditions for hydroxyapatite-like layer formation.

Building a reparative layer
From as quickly as the first use in vitro studies have shown a hydroxyapatite-like layer forming over exposed dentine and within the dentine tubules that is 60% harder than dentine.

Building an integrated and resilient layer
The hydroxyapatite-like layer formed binds firmly to the collagen in the patients dentine and helps protect your patients from the chemical and physical oral challenges they encounter in everyday lives.

In vitro studies have shown that the robust layer builds up over 5 days and, with twice-daily brushing, provides patients with continual protection from dentine hypersensitivity.

Think beyond pain relief and recommend Sensodyne Repair & Protect
